

CLAIMS

I claim:

3 1. In a halogen work light comprising a halogen lamp including an elongate halogen
4 bulb mounted in a housing and a support frame for supporting the halogen lamp, the
5 improvement comprising an elongate spare bulb container affixed to an exterior surface of
6 the supporting frame of said halogen work light, said elongate spare bulb container including
7 a tubular body open at one end and at an opposite closed end, one support piece and one end
8 piece, said support and end pieces including an integral cavity for receiving an end of an
9 elongate halogen bulb, said support piece being disposed adjacent to said closed end of said
10 tubular body and said end piece being disposed in said open end of said tubular body.

11
12 2. The improvement claimed in claim 1, wherein said support frame and said tubular
13 body are both formed of a weldable material and wherein said tubular body is affixed
14 to said support frame by welding.
